

Abstract of Disclosure

[0048] A wireless telephone link for set top box communication between the set top box and a central office is provided. This invention makes use of the AC power line to provide the communication channel between the set top box and the central office. An extension unit, connected to the set top box provides the interface, including coupling and modulation, between the set top box and the AC power line. A base unit, connected to the central office provides the interface, including the coupling and modulation of signals between the central office and the AC power line.
